

Shrouds for Large Digit Displays

Description

Shrouds are available as an option for the metal housed large digit displays.

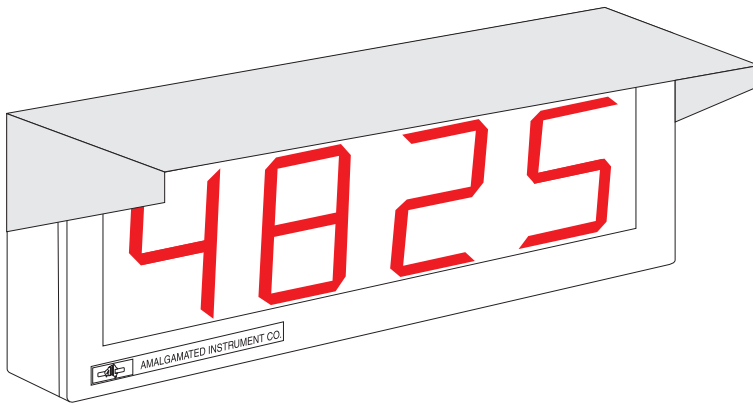

The shrouds are useful when LED displays are used in outdoor locations to shield the display from direct sunlight. The shrouds are made from powder coated steel that matches the large display enclosures. Shrouds for the 100mm displays (4 digit, 5 digit and 6 digit) are shipped as a kit of parts. The shroud for the 200mm displays is shipped as one piece.

The shrouds are secured to the displays by the wall mountings - either brackets or bolts through case holes.

Shroud kits for 100mm displays consist of 2 side panels, a top plate (length is model dependant) and fixing hardware. The overhang of the shroud is 90mm for all models. The shrouds are of powder coated steel to match the metal enclosures.

Shroud for 100mm large digit displays - 4 digit LED display illustrated

The shroud for the 4 digit 200mm display is shipped as one piece. The overhang of the shroud is 150mm. The shrouds are zinc coated steel powder coated to match the powder coated, zinc coated steel display enclosures.

Shroud for 200mm LED display
